

Traffic Safety Facts

2015 Data

February 2017

DOT HS 812 372

Key Findings

- In 2015 there were 6,165 people 65 and older killed in traffic crashes in the United States, 18 percent of all traffic fatalities.
- Older drivers made up 18 percent of all licensed drivers in 2015 compared to 15 percent in 2006.
- The population of people 65 and older increased by 29 percent from 2006 to 2015; however, driver fatalities in crashes involving older drivers increased by 3 percent over this period.
- From 2006 to 2015 older male driver fatalities increased by 10 percent compared with an 11 percent decrease in older female driver fatalities.
- In 2015 most traffic fatalities in crashes involving older drivers occurred during the daytime (74%), on weekdays (70%), and involved other vehicles (67%). This is an increase compared to all fatalities, which was 49 percent during the daytime, 59 percent on weekdays, and 44 percent involving another vehicle.
- In 2015 passenger vehicle occupants 65 and older involved in fatal traffic crashes were more likely to be restrained.
- For older pedestrians, 68 percent of fatalities in 2015 occurred at non-intersection locations.
- Among the older population, the traffic fatality rate per 100,000 population in 2015 was highest for the 85-and-older age group.

Older Population

For the purposes of this fact sheet, the term older—in relation to population, drivers, occupants, and nonoccupants—refers to people 65 and older. In this fact sheet the 2015 older population information is presented in the following order.

- Overview
- Older Drivers
- Older Population Age Groups
- Older Pedestrians
- Driver Involvement in Fatal Crashes by State and Age Group
- Fatalities by State and Age Group

This fact sheet contains information on fatal motor vehicle crashes and fatalities based on data from the Fatality Analysis Reporting System (FARS). FARS is a census of fatal crashes in the 50 States, the District of Columbia, and Puerto Rico (Puerto Rico is not included in U.S. totals). Crash and injury statistics are based on data from the National Automotive Sampling System (NASS) General Estimates System (GES). The NASS GES is a probability-based sample of police-reported crashes from 60 locations across the country, from which estimates of national totals for injury and property-damage-only crashes are derived.

Overview

In 2015 there were 6,165 people 65 and older killed and an estimated 240,000 injured in motor vehicle traffic crashes. Older people made up 18 percent of all traffic fatalities and 10 percent of all people injured in traffic crashes during the year. Compared to 2014, there was an 8-percent increase in the numbers of both fatalities and those injured in the older age group.

In 2015 some 47.8 million people—about 15 percent of the total U.S. resident population—were 65 and older. Over the past decade the fatality rate per 100,000 population of older people has steadily declined from 16.3 in 2006 to 12.9 in 2015. Figure 1 shows motor vehicle traffic fatality rates according to age groups.

Figure 1
Motor Vehicle Traffic Fatality Rates by Age Group, 2006–2015

Source: Fatality Analysis Reporting System (FARS) 2006–2014 Final File, 2015 Annual Report File (ARF).
Population: Bureau of the Census.

Some notable changes among the 65-and-older age group, over the most recent 10 years of data (2006 to 2015), are seen in Table 1:

- The population increased by 29 percent (males increased by 34% and females by 24%).
- Motorcyclist fatalities, though a relatively small number, increased by 142 percent (males increased by 144% and females increased by 100%).
- Driver fatalities among the older population increased by 3 percent (increased for males by 10% and decreased for females by 11%).
- Older pedalcyclist fatalities increased by 12 percent overall (increased for males by 8% and for females by 38%).

Table 1
Involvement of the Older Population in Traffic Fatalities by Gender, 2006 and 2015

Source: FARS 2006 Final File, 2015 ARF. Population: Bureau of the Census. Fatalities of unknown sex excluded.

Note: Use caution with reporting of percentages as some are based on small fatality figures.

People 65 and older made up 15 percent of the population in 2015, as seen in Table 1. Thirteen percent of the male population was 65 and older, while 16 percent of females were in this age group. Note that from 2006 to 2015 the number of older people in the U.S. increased by 29 percent (males by 34% and females by 24%), while the total population of all ages increased by 8 percent. Thus, a larger percentage of the population is in this age group than had been a decade ago (12% in 2006 to 15% in 2015). While there are both a larger number and larger percentage of females in this age group, gender differences shrunk over the decades.

Also interesting to note is that the percentage of females 65 and older is larger than that of males when looking at driver fatalities, total traffic fatalities, occupant fatalities, passenger vehicle occupant fatalities, pedalcyclist fatalities, and pedestrian fatalities. Males 65 and older are a larger percentage of motorcyclist fatalities. While the numbers and percentages themselves have changed, the pattern of females or males having the higher percentage for this age group is the same as a decade ago.

When it comes to restraint use of those involved in fatal traffic crashes, passenger vehicle occupants 65 and older were more likely to be restrained than those younger than 65. Older passengers involved were restrained 81 percent of the time, while passengers 65 and younger were restrained 71 percent of the time.

Older Drivers

There were 40.1 million licensed older drivers in 2015—a 33-percent increase from 10 years earlier (2006). In contrast, the total number of licensed drivers in the United States increased by 8 percent from 2006 to 2015. Older drivers made up 18 percent of all licensed drivers in 2015, compared to 15 percent in 2006.

As shown in Table 2, among the age groups displayed of drivers of drinking age in fatal crashes in 2015, older drivers involved in fatal crashes had the lowest percentage of drivers with blood alcohol concentrations (BACs) of .08 grams per deciliter (g/dL) or higher, at 8 percent.

Table 2
Age and Alcohol Involvement of Drivers in Fatal Crashes, 2015

Age Group (Years)	Drivers Involved in Fatal Crashes		
	Total	BAC .08 or Higher	
		Number	Percentage of Total
<16	154	15	10%
16–20	4,214	659	16%
21–34	14,802	4,021	27%
35–54	15,527	3,234	21%
55–64	6,453	905	14%
65+	6,490	507	8%
Total	48,613	9,649	20%

Source: FARS 2015 ARF.

*Total includes 973 drivers of unknown age.

Over the past 10 years 4 percent more people were killed in crashes involving older drivers – from 6,334 in 2006 to 6,608 in 2015. While the annual numbers of people killed in these crashes over the last 10 years has varied, there was an increase of 9 percent between 2014 and 2015. This increase in one year accounts for a large portion of the increases over the last decade. Table 3 presents total fatalities in crashes involving older drivers over the past 10 years by the role of the person killed.

Table 3
Fatalities in Crashes Involving Drivers 65 and Older, 2006–2015

	Older Drivers	Passengers in Older Drivers' Vehicles	Occupants of Other Vehicles	Non-occupants	Total
2006	3,741	979	1,197	417	6,334
2007	3,674	923	1,120	452	6,169
2008	3,475	858	1,085	407	5,825
2009	3,307	848	1,008	450	5,613
2010	3,423	886	986	487	5,782
2011	3,409	735	984	508	5,636
2012	3,471	813	1,044	612	5,940
2013	3,601	766	1,107	583	6,057
2014	3,564	750	1,128	610	6,052
2015	3,859	828	1,250	671	6,608

Sources: FARS 2006-2014 Final File, 2015 ARF.

Most traffic fatalities in crashes involving older drivers in 2015 occurred during the daytime (74%), occurred on weekdays (70%), and involved other vehicles (67%). These percentages differ from those for all fatalities in 2015: 49 percent occurred in the daytime; 59 percent occurred on the weekdays; and 44 percent involved another vehicle.

Among drivers involved in fatal crashes in 2015, drivers 65 and older had a lower involvement rate per 100,000 licensed drivers (16.19) than any other age group. Looking specifically at females, the 55-to-64 age group was slightly lower than the 65-and-older group. The

involvement rate for older male drivers was 24 per 100,000 older licensed male drivers, and the involvement rate for older female drivers was 8.92 per 100,000 older licensed female drivers, as seen in Figure 2.

Figure 2

Driver Involvement Rates in Fatal Crashes by Age and Gender per 100,000 Licensed Drivers, 2015

Source: FARS 2015 ARF.
Licensed Drivers: Federal Highway Administration.

Older Population Age Groups

While Figure 2 looked at the involvement rate for older drivers compared to other age groups, Figure 3 compares the involvement rates for age groups within the population of drivers 65 and older,

by gender. Fatal-crash driver-involvement rates per 100,000 licensed drivers among both older male (31.6) and female (12.15) drivers was highest in the 85-and-older age group.

Figure 3

Involvement Rates for Older Drivers in Fatal Crashes by Age Group and Gender, per 100,000 Licensed Drivers, 2015

Source: FARS 2015 ARF.
Licensed Drivers: Federal Highway Administration.

In 2015 among the older population the fatality rate for the 85-and-older age group was 16.94 per 100,000 population, which was higher than any other older age group. The fatality rate for the 85+ age group declined by 17 percent over the past decade, from 20.37 in 2006 to 16.94 in 2015, as shown in Figure 4.

Figure 4
Motor Vehicle Traffic Fatality Rates Among Older Populations by Age Group, 2015

Source: FARS 2005-2013 Final File; FARS 2015 ARF.
Population: Bureau of the Census.

Older Pedestrians

For older people the proportion of pedestrian fatalities in 2015 that occurred at non-intersection locations (68%) was much lower than for pedestrians under 65 (83%).

Among all fatally injured pedestrians 21 (the legal drinking age in the United States) and older, older pedestrians had the lowest percentage with BACs of .08 g/dL or higher, as seen in Table 4. Pedestrians under 16 had a lower rate of .08+ BAC; however, it is illegal for this age group to consume alcohol in the United States.

Table 4
Pedestrian Fatalities by Age Group and BAC, 2015

Age Group (Years)	Pedestrian Fatalities		
	Total	BAC .08 or Higher	
		Number	Percentage of Total
<16	262	8	3%
16-20	273	66	24%
21-34	1,083	444	41%
35-54	1,747	774	44%
55-64	959	362	38%
65+	1,002	135	13%
Total*	5,376	1,808	34%

*Total includes 50 fatalities of unknown age.

Driver Involvement in Fatal Crashes by State and Age Group

Table 5 shows driver involvement in fatal traffic crashes by State and driver age group. Included also in Table 5 is Puerto Rico, which is not included in the overall U.S. total.

Among all States, driver involvement in all fatal crashes in 2015 ranged from a high of 4,836 in Texas to a low of 30 in the District of Columbia. Specific to older drivers involved in fatal crashes, Florida had the largest number of older drivers involved at 581, compared to the District of Columbia with 1 driver involved in a fatal crash. The District of Columbia had the lowest percentage of older driver involvement with 3.3 percent, followed by Rhode Island with 8.6 percent of all drivers involved in fatal crashes being 65 and older. New Hampshire had the largest percentage, 19 percent.

Looking at the driver involvement rate per 100,000 licensed drivers in 2015 the District of Columbia was lowest with 2, followed by Rhode Island with a rate of 3. Montana had the highest driver involvement rate for those 65 and older (28), followed by Mississippi and Wyoming with a rate of 26. Nationally, 16 drivers 65 and older per 100,000 licensed drivers were involved in fatal crashes in 2015.

Fatalities by State and Age Group

The previous section looked at drivers involved in fatal crashes. Table 6 shows fatalities in traffic crashes by State and age group. Included also in Table 6 is Puerto Rico, which is not included in the overall U.S. total.

Among all States, the number of fatalities in motor vehicle crashes in 2015 ranged from a high of 3,516 in Texas to a low of 23 in the District of Columbia. The State with the highest number of fatalities of people 65 and over was Florida with 539 fatalities in 2015, compared to the District of Columbia with the fewest, 4. Wyoming had the lowest percentage of fatalities of those 65 and older, with only 7.6 percent, while Wisconsin had the highest, with 24.6 percent.

Looking at the rate by population for those 65 and older, Rhode Island was lowest with only 3 fatalities per 100,000 population in that age group, followed by the District of Columbia with a rate of 5. Montana had the highest rate, 22 per 100,000 population, followed by Mississippi with 21. The national rate was 13 fatalities 65 and older per 100,000 population.

Additional State/county-level data is available at NHTSA's State Traffic Safety Information website at <https://cdan.nhtsa.gov/stsi.htm>.
